

How to access your new BigFanMail email address Using Webmail

Webmail is another tool you can use to send and receive email. Webmail is different because you can access it using a web browser. It doesn't require you to setup the software. You can simply log into webmail and begin to use it.

The steps below will show you how to login to webmail.

Step 1: Open a browser and go to <https://yourdomain.BigFanMailHost.com/webmail>

Be sure to replace yourdomain.com with your actual domain name:

If your email address is John.Doe@BigWildcatFan.com, you would go to <https://BigWildcatFan.BigFanMailHost.com/webmail>

If your email address is SallyJones@BigBillsFan.com, you would go to <https://BigBillsFan.BigFanMailHost.com/webmail>

Step 2: Enter your username and password, and then click OK.

User Name: Enter your full email address, all lower case

Password: Enter your email address' password

Step 3: After logging into webmail, you'll be presented with three options: Horde, Roundcube, and SquirrelMail. These three options are different webmail clients that can be used for sending and reading email. All of them show you your email, however each of them has their own look & feel as well as their own unique features.

The 3 available Webmail Clients	
SquirrelMail	Limited in features, however this allows you to quickly read and respond to email
Horde	Has more functionality than SquirrelMail, however this can at times make the software slower and more "busy"
Roundcube	Feature wise it falls in between SquirrelMail and Horde, however it has a very clean look and feel to it, similar to a desktop client such as Mac Mail or Outlook
